

1 H. ABSTRACT OF THE DISCLOSURE

2 An apparatus and method for increasing the distance reached by the spray from a spray gun
3 include the use of a trigger (200) having a first grasping position (220) and a second grasping
4 position (230) are described. The trigger (200) attaches to a gun body (250) that is mounted to a
5 handle (255). The trigger (200) includes a bend (240) that connects the first grasping position (220)
6 to a second grasping position (230) and allows the trigger (200) to be squeezed proximately close to
7 a handle (255) without interference with a hand rest (265) of the handle (255).
